12. Conclusion	51

Abstract

The Customer Review and Service Analysis System is designed to collect, manage, and analyze customer feedback in order to improve service quality and customer satisfaction. In today's competitive market, understanding customer opinions and experiences is essential for business growth. This system allows customers to submit reviews, ratings, and comments about products or services through an easy-to-use interface. The system automatically stores customer feedback in a centralized database and applies analytical techniques to evaluate customer satisfaction levels.

1.Introduction

The Customer Reviews and Service Analysis System is designed to improve the quality of services offered by businesses. It collects feedback, comments, and opinions from customers in an organized manner. The collected data can be analyzed to identify areas of improvement and enhance service efficiency. This system enables businesses to better understand customer needs and implement effective strategies. In the future, decisions can be made based on real customer insights, leading to higher satisfaction and loyalty.

2.Objectives

The main objective of the Customer Reviews and Service Analysis System is to collect customer opinions in an organized and efficient manner are

- ☐ To analyze feedback to identify the strengths and weaknesses of services.
- ☐ To improve service quality based on real customer insights.
- ☐ To provide a platform for managing and responding effectively to customer suggestions and complaints.
- ☐ To enable businesses to make informed decisions, enhance customer satisfaction, and build long-term loyalty.

3.Business Processes

The business process of the **Customer Reviews and Service Analysis System** begins with customers providing feedback after using a service. These feedbacks, suggestions, and complaints are collected and stored in an organized database. The system then analyzes the data to identify service strengths, weaknesses, and areas for improvement.

Based on the analysis, management can make informed decisions to enhance service quality and address customer concerns. Finally, businesses can implement changes, monitor results, and continuously improve services to ensure higher customer satisfaction and loyalty.

4.Requirement Specification

4.1Functional Requirements

4.1.1 User (Customer) Functional Requirements

- ☐ The system shall allow users to register by providing valid personal information.
- ☐ The system shall allow registered users to log in using a username and password.
- ☐ The system shall allow users to view and select a service from the service list.
- ☐ The system shall allow users to write and submit reviews for selected services.
- ☐ The system shall allow users to provide ratings for services.
- ☐ The system shall allow users to answer questions posted by staff.
- ☐ The system shall allow users to view their review and rating history.
- ☐ The system shall allow users to log out securely.

4.1.2 Admin Functional Requirements

- ☐ The System shall allow the admin to log in using authorized credentials.
- ☐ The system shall allow the admin to view and manage the user list.
- ☐ The system shall allow the admin to manage services and staff accounts in the system.
- ☐ The system shall allow the admin to insert, update and delete new staff or services.
- ☐ The system shall allow the admin to view all customer feedback and service ratings.
- ☐ The system shall allow the admin to generate reports for service analysis.
- ☐ The system shall allow the admin to log out securely.

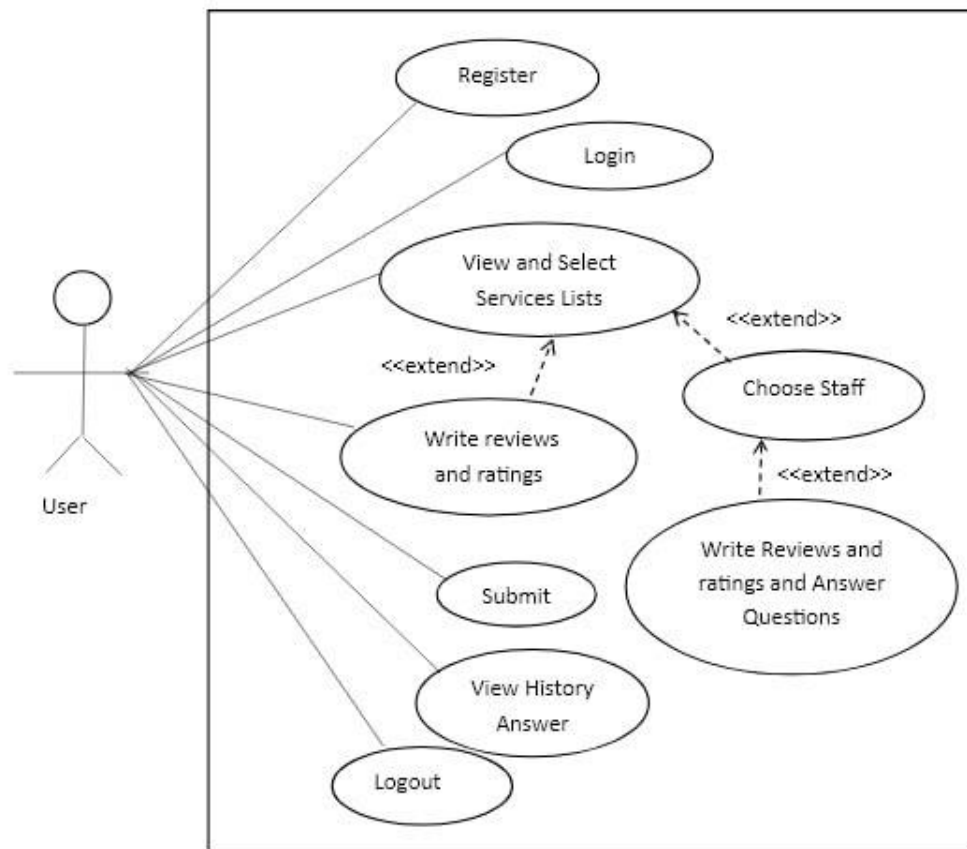

4.1.3 Staff Functional Requirements

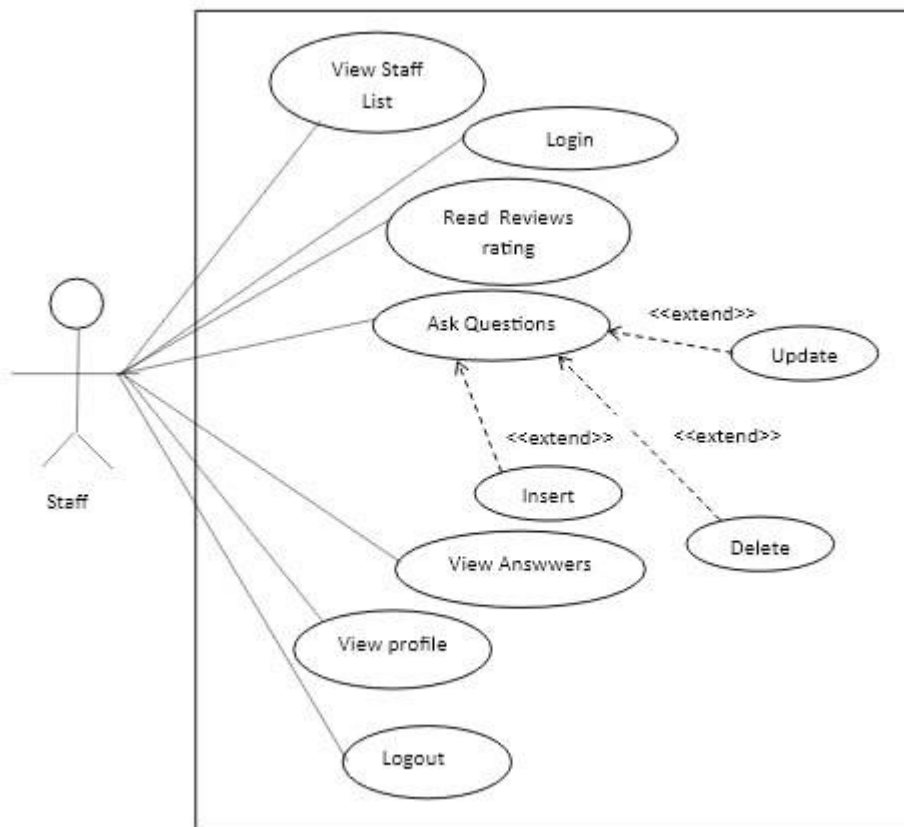

- ☐ The system shall allow staff members to login using valid credentials.
- ☐ The system shall allow staff to view customer ratings and reviews.
- ☐ The system shall allow staff to ask questions related to services.
- ☐ The system shall allow staff to submit questions to customers.
- ☐ The system shall allow staff to update, Insert and delete asked questions.
- ☐ The system shall allow staff to log out securely.

5.Nonfunctional Requirements

- ☐ **Security:** Access control must restrict actions based on roles (admin, staff, customer).
- ☐ **Performance:** The system should respond quickly.
- ☐ **Reliability:** System uptime should be 99.5%.
- ☐ **Usability:** Dashboard and analytics should use visual graphs and charts for easy understanding.
- ☐ **Availability:** Data backup should occur daily, with recovery time < 1 hour in case of failure.
- ☐ **Scalability:** System should handle growing number of reviews and users without major performance degradation.
- ☐ **Maintainability:** System should support modular updates (adding new service types or staff features).
- ☐ **Compliance:** System should support modern browsers (Chrome, Edge, Firefox, Safari).

6. Use Case Diagram

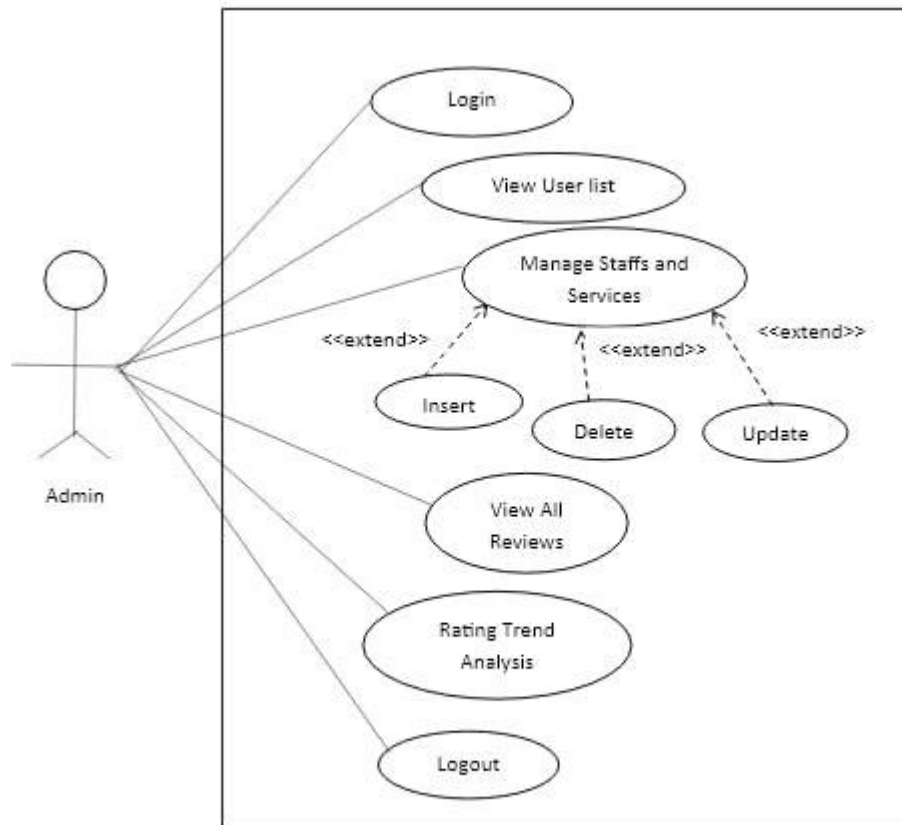

Figure6.1: Preliminary Use Case diagram for **Customer Review and Service Analysis System**

7. Text Description for Customer Review and Service System

7.1.Actor: Admin

(1) Login

This use cases authenticates the admin for secure to management features.

Table7.1.1. Use case “Login”

Actions performed by Admin	Responses by the system
1.Selects “Login”	
	2.The system displays a login form that include username, email and password.
3.Enters username, email and password.	
	4.The system validates and grants admin access if correct.
	5.If the credentials are valid, the system grant access and displays the homepage.
	6.If the credentials are invalid, the system displays an error message and prompts to try gain.

(2) View User List

Allows the admin to access user list for management process.

Table7.1.2. Use case “View User List”

Action performed by the actor	Responses from the system
1. Admin clicks 'View User List.'	
	2. System retrieves and display all user list.

(3) Management staff

Allow the admin to manage Staff profiles in the system.

Table7.1.3. Use case “Management Staff”

Actions performed by Admin	Responses by the system
1.Admin clicks ‘Manage Staff’.	
	2.System displays staff list and form.
3.Admin inserts/updates/deletes staff case.	
	4.System validates and updates DB. If invalid, show error and goes to Step 2. Otherwise, it exits.

(4) Manages Services

Allow the admin manage service profiles in the system.

Table7.1.4. Use case “Manage Service”

Actions performed by Admin	Responses by the system
1.Admin clicks ‘Manage Services’	
	2.System displays services list and form.
3.Admin insert/updates/deletes services case.	
	4.System validates and updates DB. If invalid, show error and goes to Step 2. Otherwise, it exits.

(5) View of Reviews

Allow the admin can view user's reviews in the system.

Table7.1.5. Use case "View all Reviews"

Actions performed by Admin	Responses by the system
1.Admin clicks 'View of Reviews'	
	2.System retrieves and displays all reviews.

(6) View Analysis Rating

The admin can user's rating in the system.

Table7.1.6. Use case "View Analysis Rating"

Actions performed by Admin	Responses by the system
1.Admin clicks 'View of Reviews'	
	2.System retrieves and displays all reviews.

(7) Logout

Ends the admin session securely.

Table7.1.7. Use case "Logout"

Actions performed by Admin	Responses by the system
1.Clicks "Logout"	
	2.The system ends the admin session and return to the login page.

7.2.Actor: Staff

(1) View Staff List

The staff views the staff list displayed by the system.

Table7.2.1. Use case “View Staff List”

Action performed by the staff	Responses from the system
1. Staff clicks “View Staff List”.	
	2.System retrieves and display all user lists.

(2) Login

The staff enters username and password to access the system.

Table7.2.2. Use case “Login”

Actions performed by the staff	Responses from the system
1.The staff opens the login page.	
	2.The system displays fields to enter name and password.
3.The staff enters name and password and login.	
	4.The entered username and password are sent to the Staff Login class to be checked.
	5.If credentials are valid, the system grants access and displays the homepage.
	6.If credentials are invalid, the system displays an error message and prompts to try again.

(3) Read Review

The staff views customer reviews and ratings.

Table7.2.3. Use case “Read Review”

Actions performed by the staff	Responses from the system
1.The staff login into the system.	
	2.The system check the staff.
3.The staff selects Read Reviews.	
	4. .The system displays customer reviews and ratings.
5.The staff views the reviews.	

(4) Insert Question

The staff inserts new question data into the system.

Table7.2.4. Use case “Insert Question”

Actions performed by the staff	Responses from the system
1.The staff clicks the insert button.	
	2.The system displays forms.
3.The staff submits the form.	
	4.System validates and updates DB.If invalid,show error and goes to step2.Other,it exits.

(5) Delete Question

The staff deletes selected question data from the system.

Table7.2.. Use case “Delete Question”

Actions performed by the staff	Responses from the system
1.The staff confirms the deletion.	
	2.The system removes the selected data from the database.
3.The staff waits for confirmation.	
	4.The system displays a successful deletion message.

(6) Update Question

The staff updates existing question information.

Table7.2.6. Use case “Update Question”

Actions performed by the staff	Responses from the system
1.The staff clicks the update option.	
	2.The system displays editable data form.
3.The staff modify the required information.	
	4.The system validates the updated data.
5.The staff submits the changes.	
	6.The system updates the data in the database and displays a success message.

(7) View Answer

The staff can view answer in the system.

Table7.2.7. Use case “View Profile”

Actions performed by the staff	Responses from the system
1.The staff clicks view answer.	
	1. The system displays the result.

(8) View Profile

The staff views personal profile information.

Table7.2.8. Use case “View Profile”

Actions performed by the staff	Responses from the system
1.The staff login and enter homepage.	
	2.The system shows the staff profile page.
3.The staff views their personal information.	
	4.The system displays name and photo.

(9) Logout

The staff logs out from the system.

Table 7.2.9. Use case “Logout”

Actions performed by the staff	Responses from the system
1.The staff clicks the logout button.	
	2.The system ends the session.
3.The staff waits for confirmation.	
	4.The system redirects to the login page.

Actor: User

1.Register

Table 7.2.10. Use case “Register”

Action performed by the actor	Responses from the system
1.Select the “Register” option.	
	2.The system displays a registration form asking for details such as name, email and password.
3.Fills in the required information.	
	4.The system validates that all mandatory fields are filled correctly. If invalid, show error message.
5.Submits the form.	
	6.The system stores the user information in the databases.
	7.The system confirms that registration was successful and prompts the user to log in.

2.Login

Table7.2.11. Use case “Login”

Action performed by the actor	Responses from the system
1.Selects the “Login” option.	
	2.The system displays a login form for username and password.
3.Enters their credentials (username and password)	
	4.The system verifies the credentials against the database. If invalid, show error message.

3.View and Select Service List

Table7.2.12. Use case “View and Select Service List”

Action performed by the actor	Responses from the system
1. User makes a request to open the Review Page.	
	2. System retrieves the Service List through UserServiceReviewServlet.
3. User performs Write Comment and Select Rating for the service.	
	4. System processes the Post Review data including user_id, service_id, reviewText, and rating.
5. User clicks the Submit button to send the review.	
	6. System calls Inser review (Insert review) to save the data into the database .
	7. System returns a Success Response to the service page.

4. Write Review and Rating Answer Question

Table 7.2.13. Use case “Write Review and Rating Answer Question”

Action performed by the actor	Responses from the system
1. User makes a request to open the Review Page.	
	2. System retrieves the staff list through UserReviewServlet using a loop and displays the result from ReviewDAO.
3. User selects a specific Stylist from the list.	
	4. System fetches relevant questions for the selected stylist via ReviewDAO.
	5. System retrieves the available rating options for the user to select using a loop.
6. User fills in the details and Submit the review.	
	7. System calls saveReview() to insert the review data into the database via ReviewDAO.
	8. System receives a success message and returns the final result to the User.

11.Implementation

11.1.1.Admin Login Page

Admin must input name, email and password to enter home page.

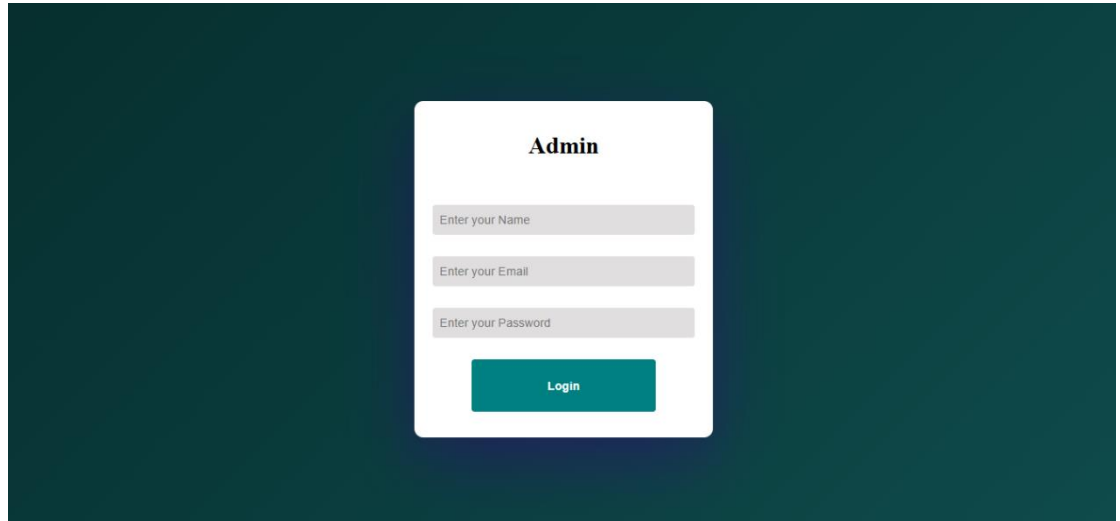

A screenshot of an admin login page. The page has a dark teal background. In the center, there is a white rectangular box with rounded corners. Inside this box, the word "Admin" is written in bold black text at the top. Below it, there are three input fields with light gray borders and placeholder text: "Enter your Name", "Enter your Email", and "Enter your Password". At the bottom of the white box, there is a teal button with the word "Login" in white text.

Figure 11.1.1-Admin login page

11.1.2. Admin Home Page

In the home page there are nine buttons that only Admin can view dashboard, user, staff list, add staff, service list, add service, review staff, review service and rating.

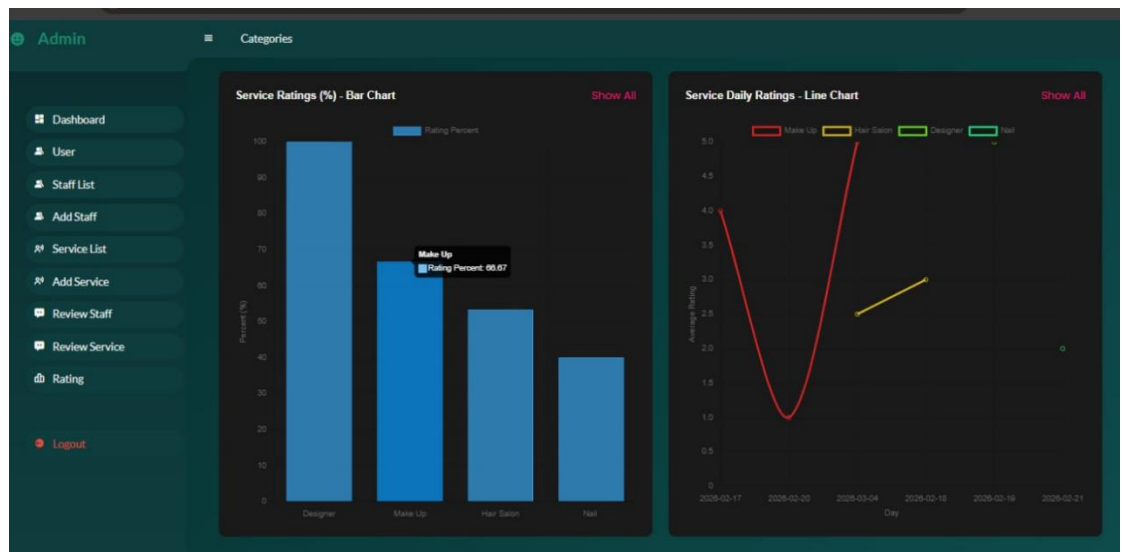

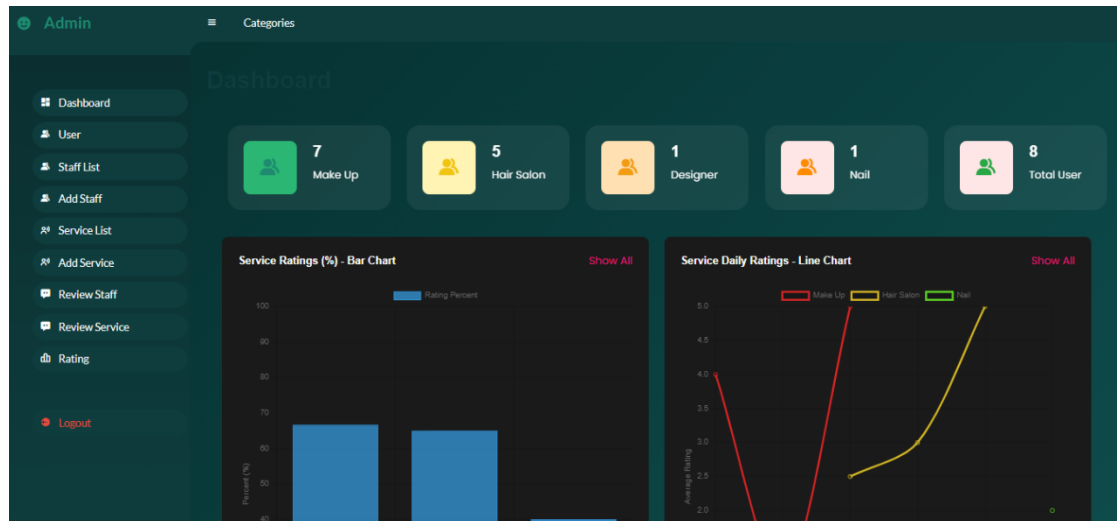

Figure 11.1.2- Admin home page

11.1.3 Admin Dashboard

Firstly, you need to click “Admin” to enter admin login page.

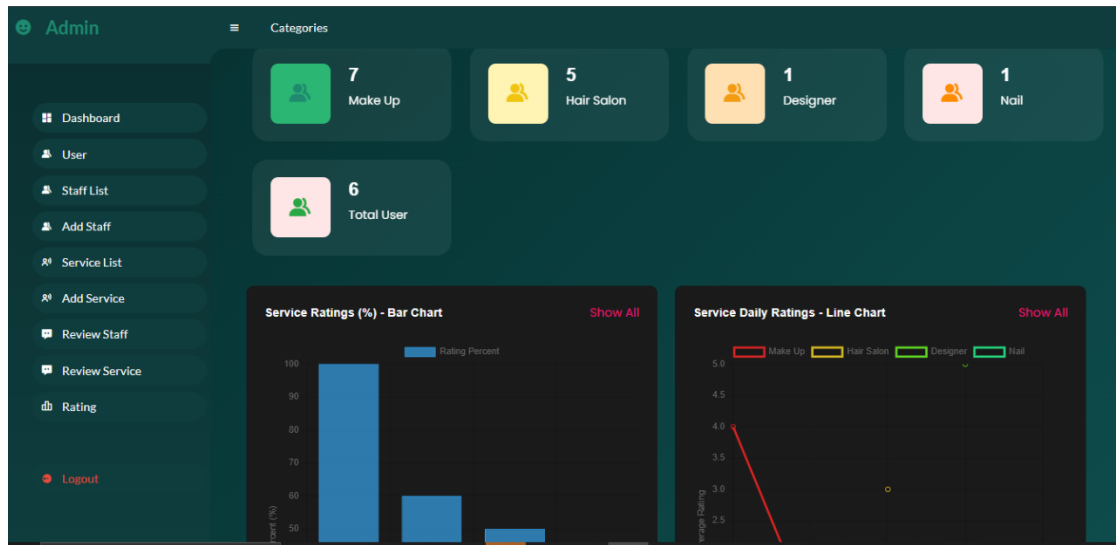

Figure 11.1.3- Introduction page

11.1.4 View All Staff List page

Admin can view staff list from dashboard.

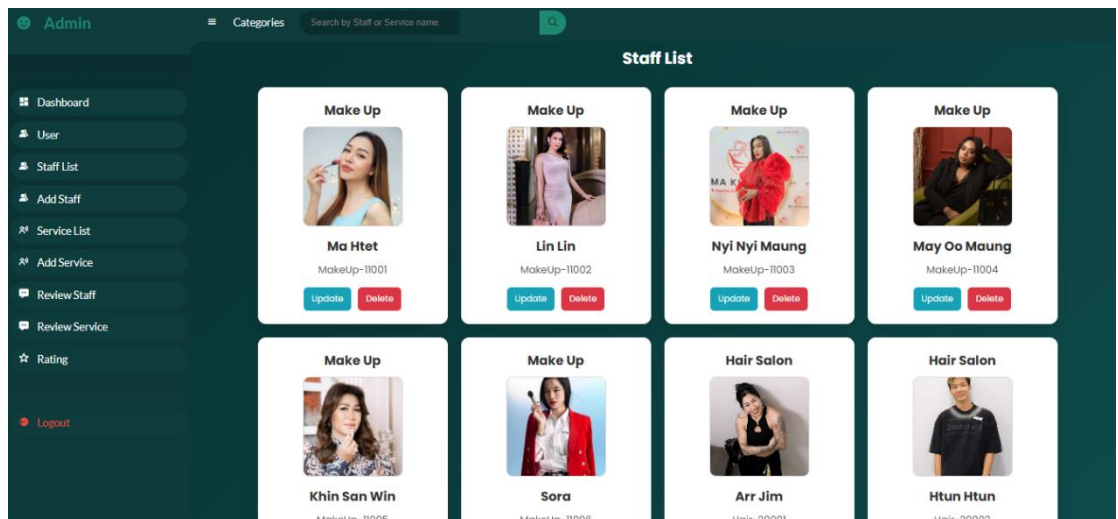

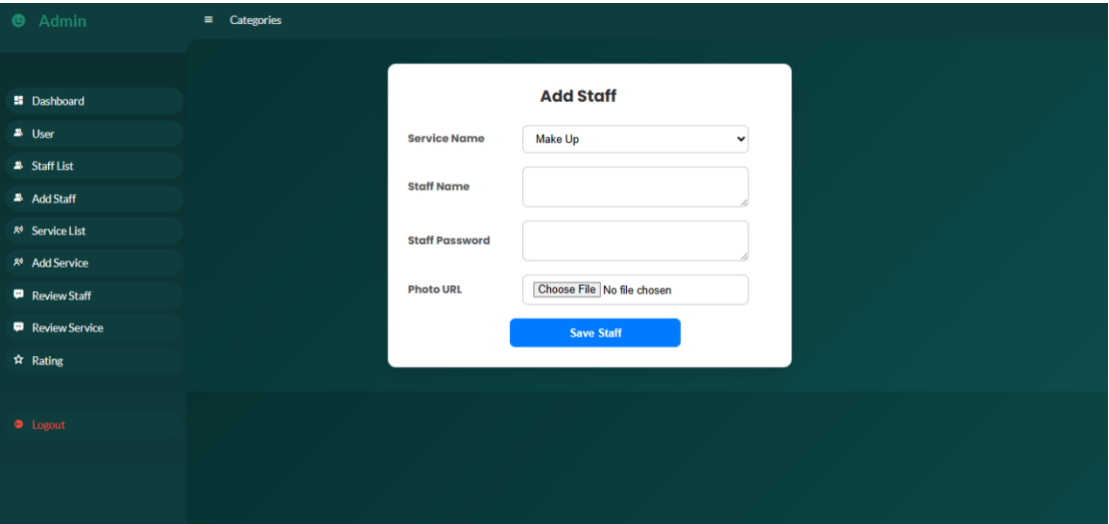

Figure 11.1.4- View all staff list page

11.1.5.Add Staff Page

Admin must input service name, staff name, and staff password to enter add staff page.

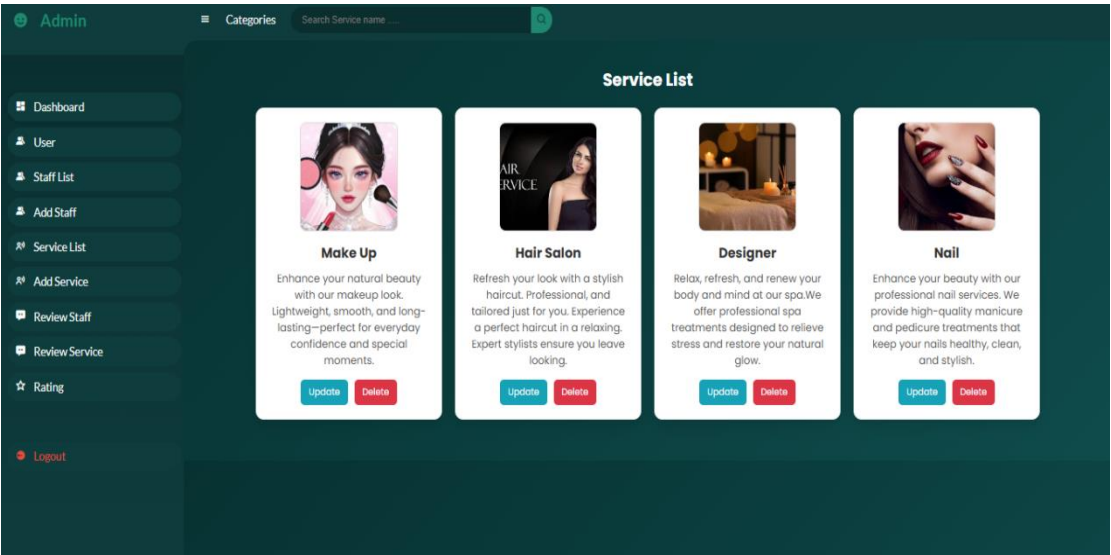

The screenshot shows the 'Add Staff' form within the Admin dashboard. The form is titled 'Add Staff' and includes the following fields: 'Service Name' (a dropdown menu with 'Make Up' selected), 'Staff Name' (a text input field), 'Staff Password' (a text input field), and 'Photo URL' (a file upload button labeled 'Choose File' and a status 'No file chosen'). A blue 'Save Staff' button is located at the bottom of the form. The left sidebar contains navigation links: Dashboard, User, Staff List, Add Staff, Service List, Add Service, Review Staff, Review Service, Rating, and Logout.

11.1.5- Add staff page

11.1.6. Service List Page

Admin can view service list and delete service list.

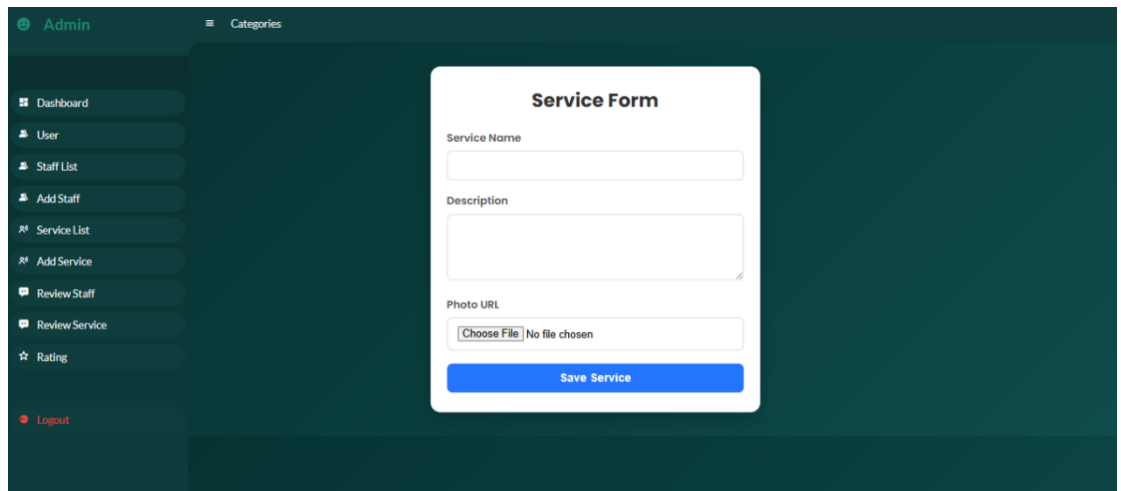

The screenshot shows the 'Service List' page in the Admin dashboard. The page features a search bar at the top with the text 'Search Service name'. Below the search bar, there are four service cards displayed in a grid. Each card includes an image, a title, a description, and 'Update' and 'Delete' buttons. The services listed are: 'Make Up' (Enhance your natural beauty with our makeup look. Lightweight, smooth, and long-lasting—perfect for everyday confidence and special moments.), 'Hair Salon' (Refresh your look with a stylish haircut. Professional, and tailored just for you. Experience a perfect haircut in a relaxing. Expert stylists ensure you leave looking.), 'Designer' (Relax, refresh, and renew your body and mind at our spa. We offer professional spa treatments designed to relieve stress and restore your natural glow.), and 'Nail' (Enhance your beauty with our professional nail services. We provide high-quality manicure and pedicure treatments that keep your nails healthy, clean, and stylish.). The left sidebar contains navigation links: Dashboard, User, Staff List, Add Staff, Service List, Add Service, Review Staff, Review Service, Rating, and Logout.

Figure 11.1.7- Service list page

11.1.8. Service Form Page

Admin must input service name, description, choose a photo file, and click save service to add it.

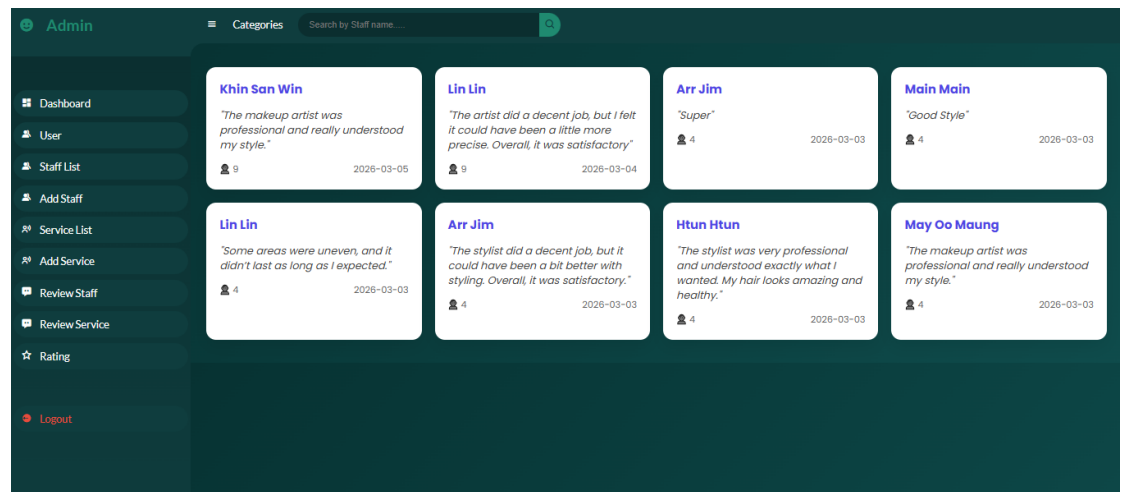

The screenshot shows the 'Service Form' page in the Admin dashboard. The left sidebar contains navigation links: Dashboard, User, Staff List, Add Staff, Service List, Add Service, Review Staff, Review Service, Rating, and Logout. The main content area displays a form with the following fields: Service Name (text input), Description (text area), and Photo URL (file upload button labeled 'Choose File' with 'No file chosen' text). A blue 'Save Service' button is at the bottom of the form.

Figure 11.1.7- Service form page

11.1.9. Review Staff Page

Admin can view staff member with their service reviews.

The screenshot shows the 'Review Staff' page in the Admin dashboard. The left sidebar is the same as in Figure 11.1.7. The main content area displays a grid of staff member review cards. Each card shows the staff member's name, a quote from a review, a rating (represented by a person icon and a number), and the date of the review.

Staff Member	Review Text	Rating	Date
Khin San Win	"The makeup artist was professional and really understood my style."	9	2026-03-05
Lin Lin	"The artist did a decent job, but I felt it could have been a little more precise. Overall, it was satisfactory."	9	2026-03-04
Arr Jim	"Super"	4	2026-03-03
Main Main	"Good Style"	4	2026-03-03
Lin Lin	"Some areas were uneven, and it didn't last as long as I expected."	4	2026-03-03
Arr Jim	"The stylist did a decent job, but it could have been a bit better with styling. Overall, it was satisfactory."	4	2026-03-03
Htun Htun	"The stylist was very professional and understood exactly what I wanted. My hair looks amazing and healthy."	4	2026-03-03
May Oo Maung	"The makeup artist was professional and really understood my style."	4	2026-03-03

This page allows users to write a comment and give a rating for the selected hair stylist.

The screenshot shows a dark-themed user interface for a review form. At the top, the name 'Khin San Win' is displayed. Below it, the specialty 'Make Up' is listed. A section titled 'How do I apply makeup?' contains four radio button options: 'Super', 'Good', 'Average', and 'Bad'. The 'Super' option is selected. Below the radio buttons is a text input field labeled 'Your Comment:' with the placeholder text 'Write your review here...'. At the bottom, there is a 'Rate Overall:' section with five star icons. The first star is filled, and the others are empty. A red 'Submit Review' button is located at the bottom right of the form.

Figure 11.2.9- View stylist detail page

12. Conclusion

The Customer Review and Service Analysis System provides an efficient platform for collecting and managing customer feedback. By allowing users to submit reviews and ratings, the system helps organizations analyze service performance and identify areas for improvement. With secure role-based access for Admin, Staff, and Users, the system ensures organized data management and reliable analysis. Overall, this system supports better decision-making, improves service quality, and enhances customer satisfaction.
